EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark Stone on October 16, 2007.

IN THE CLAIMS

The claims have been amended as follows:

Claim 1 (Currently amended) Method to process monitor and control a machine for continuous bending of long products (11) to a predetermined radius, [[characterized in that]] comprising, bending the long product into a radius and using three parallel, fixed contact-free distance meters (20-22) [[are used]] and [[the]] measuring the distances [[are measured]] to the bent surface on the product (11), the actual bending radius is calculated based on the fixed distances between the meters and the measured distances, and adjustment of the machine is carried out in response to the calculated actual radius in relation to the desired radius, and in that for the calculation, the bending radius between the measuring points is approximated by means of a second-degree polynomial.

Claim 5. (Currently amended) Machine for continuous bending of long products to a predetermined radius, comprising a bending device for bending the long product with a radius

Art Unit: 3725

and a feeding device for feeding the long product through the bending device, characterized by three parallel contact-free distance meters for measurement of the distances to the bend surface of the long product, a processor coupled to the distance meters for calculation of the actual bending radius and coupled to control the adjustment of the machine in response to the relation between the calculated actual bending radius and the desired radius, wherein, for the calculation, the bending radius between the measuring points is approximated by means of a second-degree polynomial.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: One reason for allowance is that the prior art of record does not show the claimed method and machine *inter alia* with the bending radius between the measuring point is approximated by a second-degree polynomial, thus, producing an approximation of an actual bending radius with only some percent error (page 3 of applicant's specification).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
